SUMMARY

Full Stack Developer with a strong backend foundation built over 3+ years of leading production infrastructure, critical database migrations, and complex third-party integrations. Recently expanded into full-stack development, delivering end-to-end features with Next.js, Strapi CMS, and GraphQL while building type-safe API layers and restructuring frontend architecture. Expertise in TypeScript, NestJS, Next.js, PostgreSQL, and SQL database. Passionate about bridging backend depth with frontend delivery to build scalable, maintainable products.

EXPERIENCE

Brand Atlas

Sep 2025 – Mar 2025

Full Stack Developer

- Developed and maintained full-stack web applications for a global luxury branded residences marketplace using Next.js, Strapi CMS, PostgreSQL, and GraphQL, deployed on AWS with PM2
- Implemented a type-safe API layer by integrating graphql-codegen with TanStack Query, auto-generating TypeScript types for all Strapi GraphQL requests and responses — significantly reducing development time and debugging effort
- Refactored the advisory page by classifying component changes into unchanged, redesigned, and new groups, ensuring shared components remained compatible across all pages and preserving the existing Strapi content structure
- Restructured collective page navigation to properly reflect a self-referencing main/subcategory hierarchy and replaced client-side filtering with server-side API calls, eliminating stale data issues and improving reliability
- Designed and optimized PostgreSQL schemas in Strapi CMS to ensure data integrity, scalability, and efficient query performance

Everself

May 2024 – July 2025

Sole Backend developer

- Collaborated with PM to analyze feature feasibility and technical requirements, designing implementation workflows and database schemas that balanced business needs with technical constraints while ensuring scalable, maintainable solutions
- Served as sole backend developer managing entire production infrastructure—implemented features from concept to deployment using NestJS/TypeScript, maintained third-party integrations, and resolved critical production issues in real-time
- Orchestrated complex integrations between healthcare systems and third-party services—integrated Healthie's GraphQL API for EHR/telehealth functionality, synchronized Close CRM for patient relationship management, implemented Stripe payment processing with subscription handling, and configured Twilio/SendGrid for email and sms communications

- Led migration of the production database from MySQL 5.7 to PostgreSQL 16.6 (GCP), resolving type conflicts, rewriting migration logic, and validating data accuracy with pgCompare to avoid increased cloud costs and ensure third-party compatibility

Baania

Nov 2022 – Apr 2024

Team lead & Backend developer

- Led project planning in agile startup environments — analyzed features, negotiated timelines, and delegated tasks; coordinated across frontend, PM, and data teams
- Optimized data layer performance through efficient database design, refactored complex queries, and implemented Redis caching to reduce API response times by 30–40%
- Led database migration from AWS RDS to Google Cloud SQL, implementing new architectural strategies for enhanced scalability

Digital Endpoint

Feb 2022 – Apr 2022

Manual Software Tester

- Designed comprehensive test scripts covering global use cases and edge scenarios for monitoring and security features
- Collaborated with the development team to identify and document 50+ bugs with detailed reproduction steps, reducing debugging time and improving sprint velocity

SKILLS

Programming language: TypeScript, Nest.js, Express.js, Node.js, React.js, Next.js, SQL, NoSQL

Technologies: Rest API, GraphQL, Redis, Docker, TanStack Query, Git, GitHub Actions

Tools: Linear, HubSpot, Close CRM, Strapi CMS, Stripe, Twilio, SendGrid, Healthie API

EDUCATION

Software Park Thailand

2022

Full-Stack Developer Code Camp

Chulalongkorn University

2017 – 2021

Bachelor of Engineering, Major: Metallurgical and Materials Engineering
